We created our service to meet the needs of our users.

Our commitment is to do more than simply service your computer - we want to be certain that you are completely satisfied and comfortable with your computer service experience. We do this by taking care of your computer repairs for you!

After providing an initial diagnosis and estimate, we complete most needed upgrades or repairs, ensuring that your computer system work properly before we leave. In most cases, all work can be done in a single visit.

All of this for a price that is competitive with what many of the "big guys" charge for carry-in service! So if you live in town and have a business network of 5 computers or more then contact us by email.

1. Prevention is better, less expensive and easier, than computer repairs. The best way to be sure that nothing goes wrong with your computer is to perform routine computer maintenance regularly.

1. Maintenance goes far beyond the physical hardware, we check for viruses, trojans, malware, spy ware and adware which can severely affect performance - and waiting too long can cost you much more than the ounce of prevention. We will also tune your workstation for peak performance.

1. Your computer system hardware contains both mechanical and electronic components that are extremely delicate, sensitive and in need of regular care. Many times computer failure can be prolonged or eliminated by implementing a proactive computer maintenance program.

1. The Computer Guys will provide routine preventative computer maintenance checks, regular cleanings, do installations and upgrades, and provide repairs when necessary. Tuning your computer to it's highest level of performance.

1. We are available to provide the level of maintenance service you require and we offer fast response times, competitive rates and great customer service! We come to your place of business to service your computer needs. Our professional, courteous employees are at your disposal to answer any computer related questions you might have and to take care of your computer.

1. Our primary function has always been computer maintenance and we have considerable experience and expertise in hardware problems. We are always happy to offer computer maintenance contracts tailored to match your company's response needs and budget
